

Verification Report: data_clean

Ellis Hughes

2021/03/24

Description

This is the verification report for the `data_clean` folder of the `correlates_reporting` project for CoVPN.

In this document, the output of `make_data_proc.R` is compared against the output of `process_data_raw.R`. The two scripts use the same base mock data. The two datasets generated by the two scripts will be compared with each other to confirm they contain the same values.

`process_data_raw.R` was independently double programmed based on the specifications found in `dat_clean_specifications.pdf`. This script outputs its processing to `data_clean/verification/verification_output/data_clean_verification_output.csv`

The file `data_clean/verification/verification_input/practice_data.csv` was provided by the original programmer to the tester for verification purposes of `make_data_proc.R`. Its md5 hash is 72339734afa462702f548208921e02a0.

Load Data

```
original_data <- read_csv(  
  here("data_clean/verification/verification_input", "practice_data.csv"),  
  guess_max = 30000  
)  
  
verification_data <- read_csv(  
  here("data_clean/verification/verification_output/data_clean_verification_output.csv"),  
  guess_max = 30000  
)
```

Verification

```
data_clean_comparison <- compare_datasets(  
  cols = colnames(original_data), index = "Ptid",  
  ds1 = original_data, ds2 = verification_data  
)
```

There are 0 mismatched fields of 86.

Output of `make_data_proc.R` is identical to the output of `process_data_raw.R`, and passes verification.
