Estimates of mean symptomatic COVID−19 infection risks
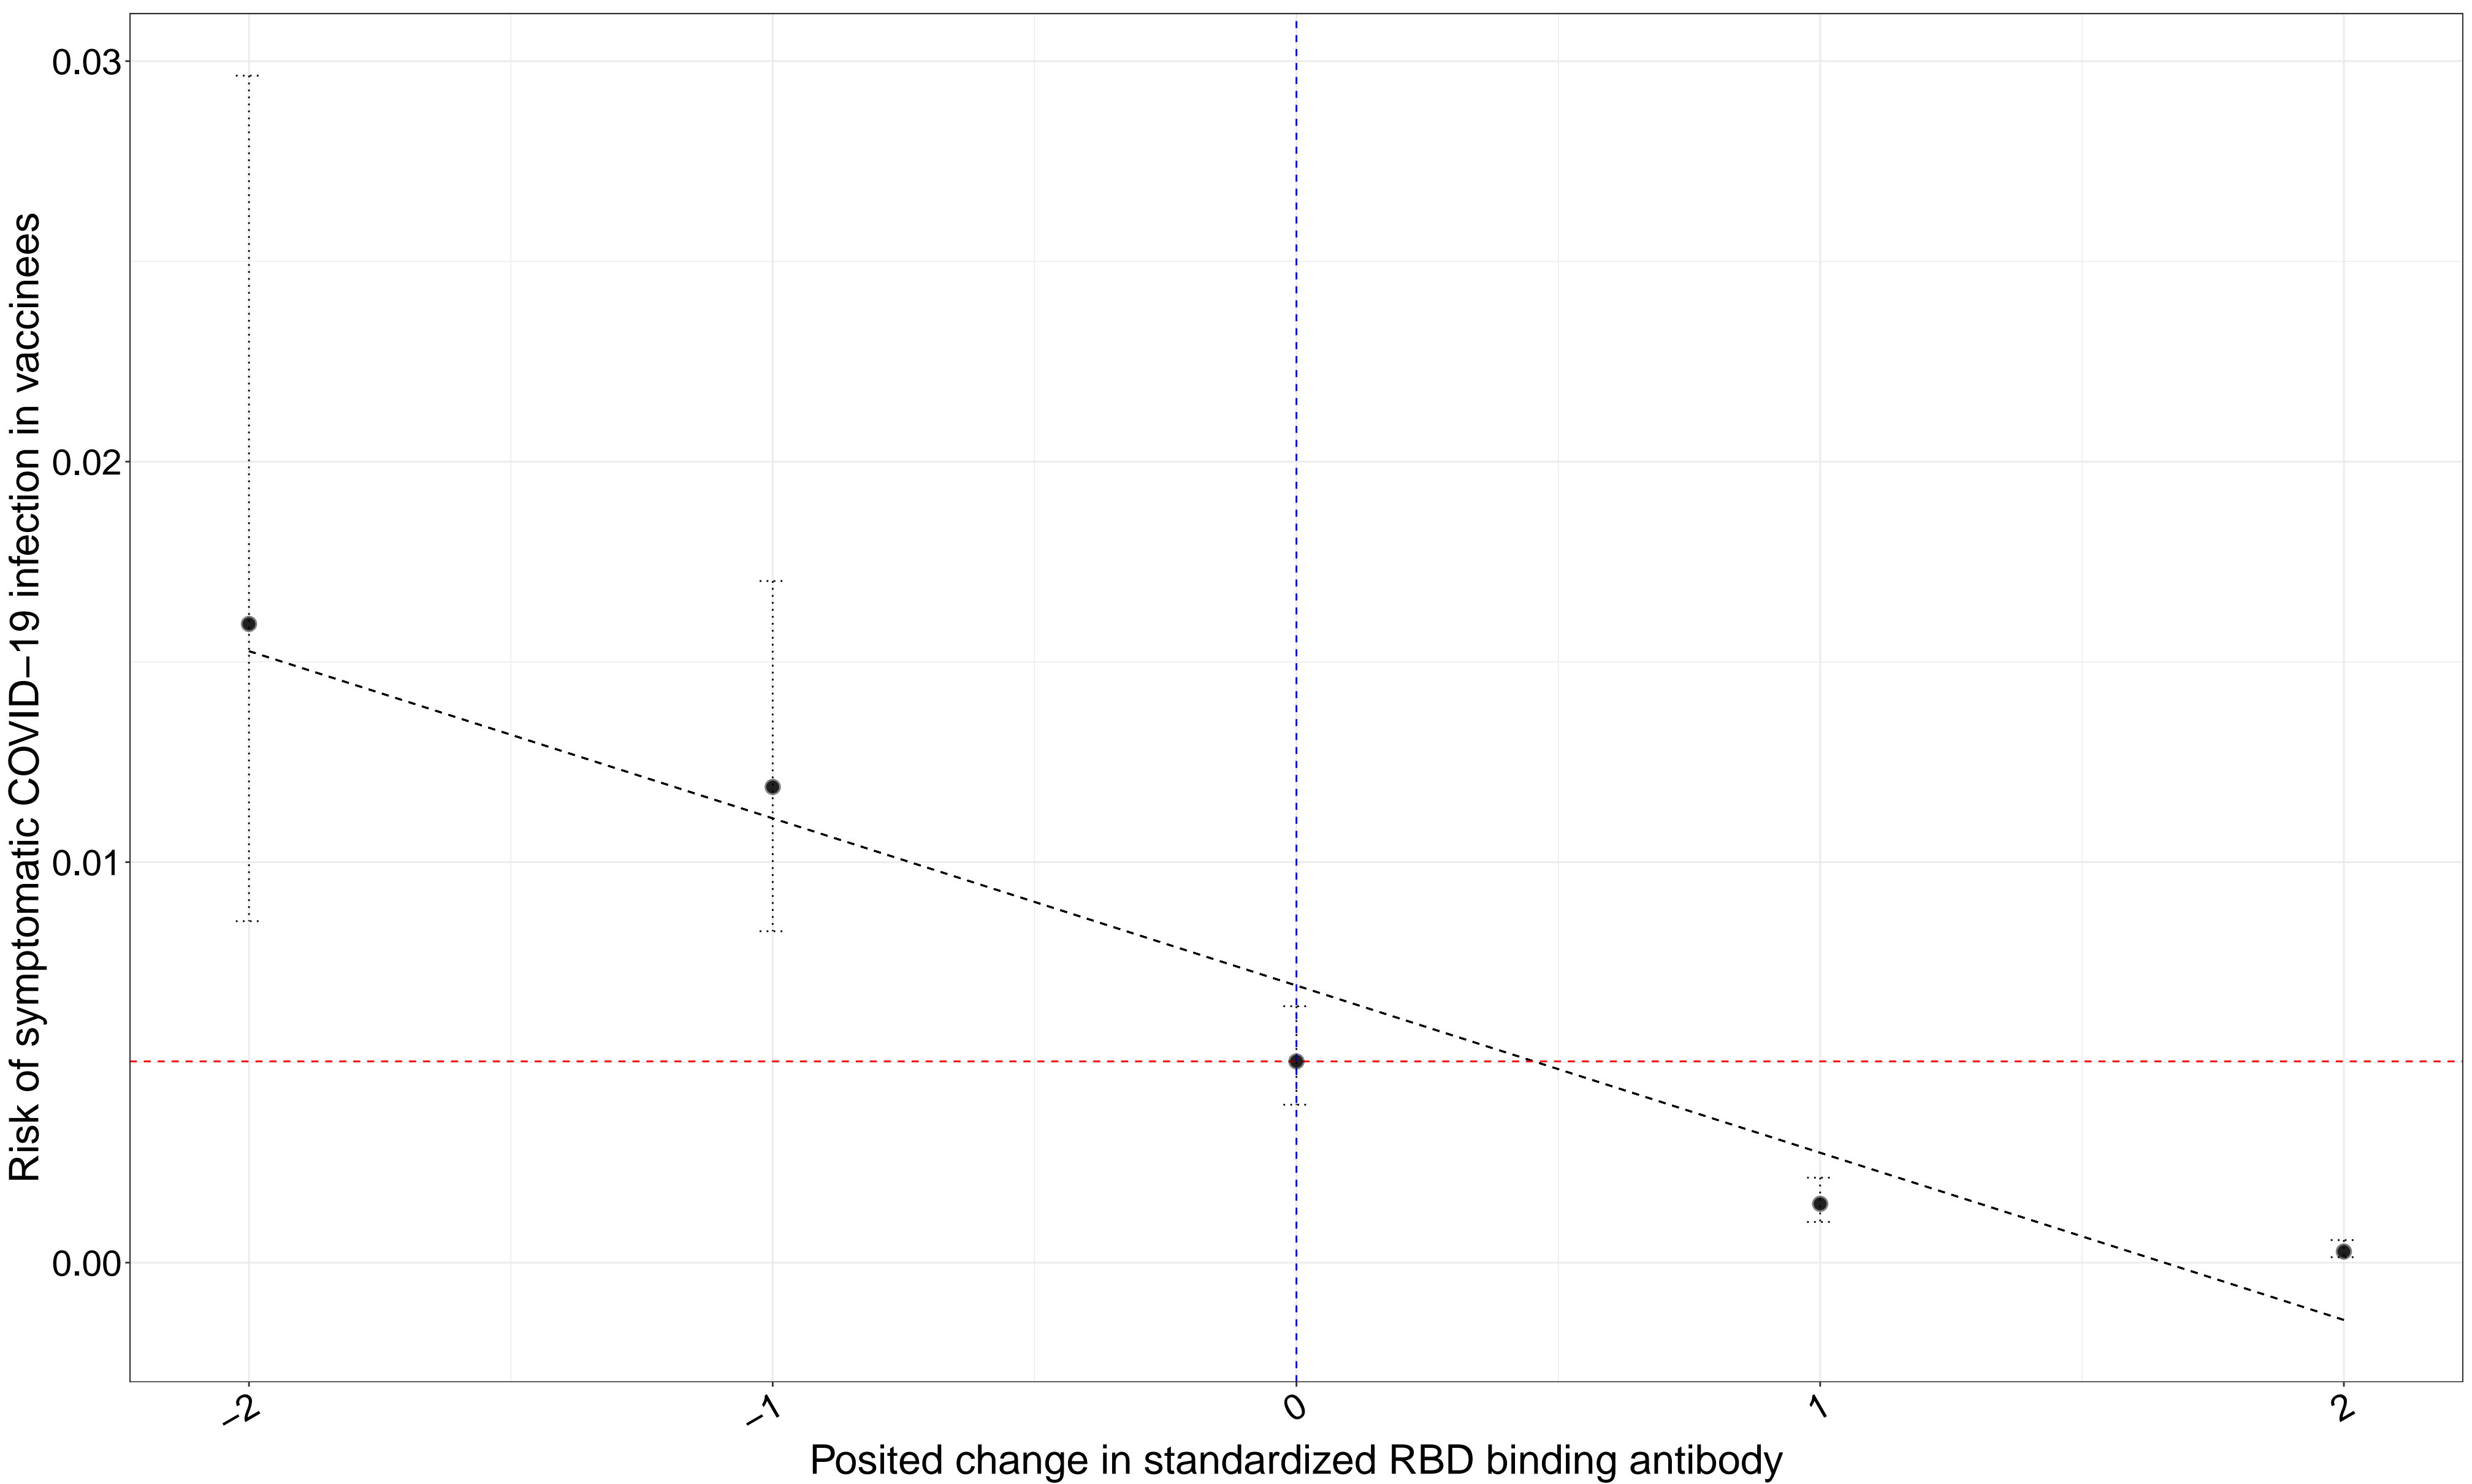

working MSM summary: ($\hat{\beta}_{TMLE} = -0.0042$, p−value = 6e−04)

Risk of symptomatic COVID−19 infection in vaccinees

Posited change in standardized RBD binding antibody

Counterfactual COVID−19 infection risks across standardized shifts
in RBD binding antibody levels, with projection of
dose−response curve onto a linear working model for summarization.
