Estimates of mean symptomatic COVID−19 infection risks
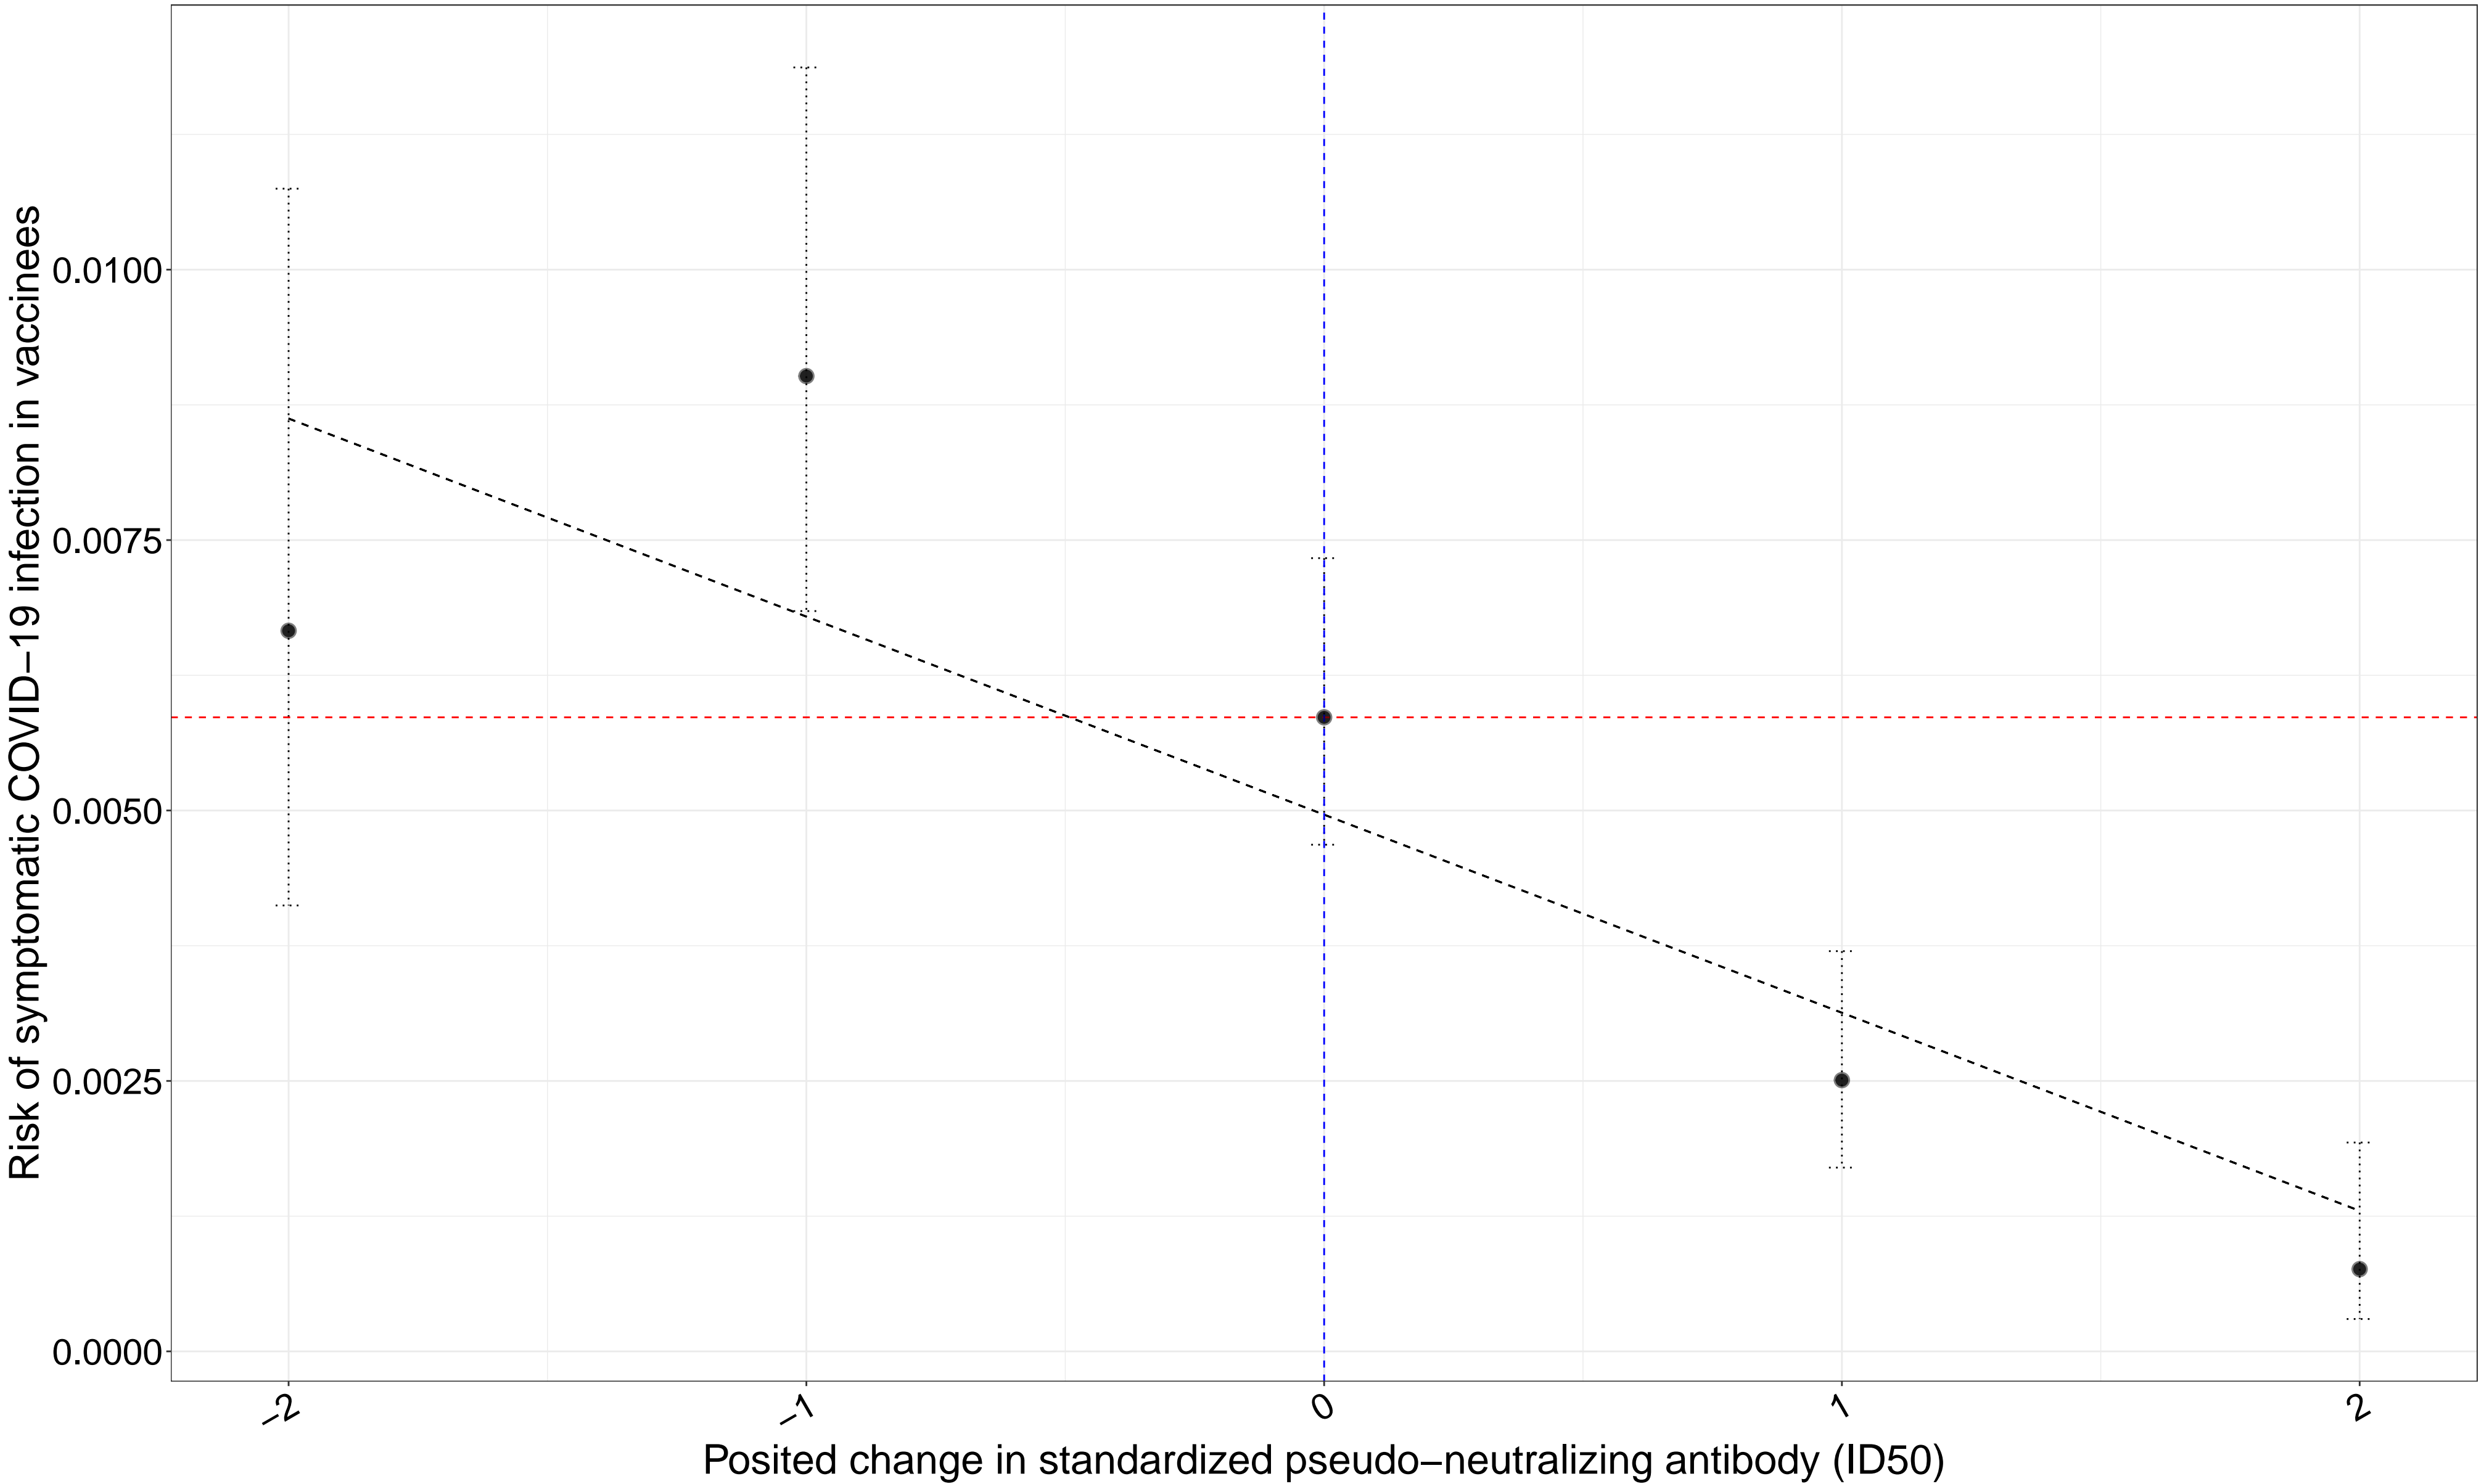

working MSM summary: ($\hat{\beta}_{TMLE} = -0.0018$, p−value = 0)

Risk of symptomatic COVID−19 infection in vaccinees

Posited change in standardized pseudo−neutralizing antibody (ID50)

Counterfactual COVID−19 infection risks across standardized shifts
in pseudo−neutralizing antibody (ID50) levels, with projection of
dose−response curve onto a linear working model for summarization.
